

A heatmap visualization showing the relationship between Training Data Split (X-axis, ranging from 0.1 to 0.9) and Pose error (in degrees) (Y-axis, ranging from 0 to 180). The color scale represents the magnitude of the pose error, ranging from  $10^0$  (dark purple) to  $10^3$  (yellow). The plot shows a diagonal band of high error (yellow) and a region of low error (dark purple) in the bottom right corner.
